

AMIR ASLAN MOSAFERI
FIRE PROTECTION ENGINEER

01 / 03

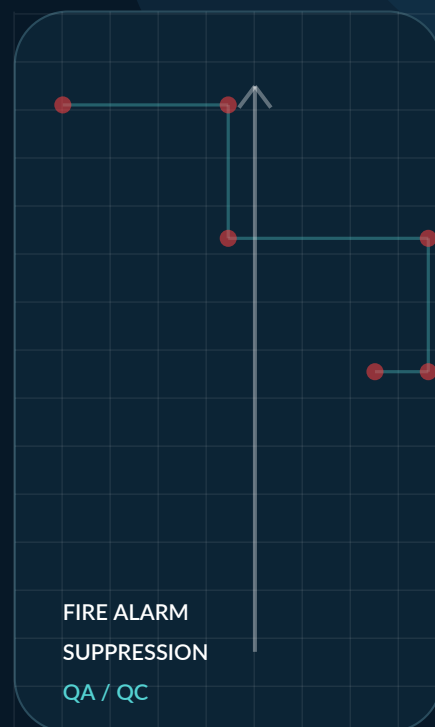

REMOTE ENGINEERING SUPPORT

FIRE PROTECTION ENGINEERING SERVICES

Design, calculations, drafting and technical review for MEP consultants, fire-protection contractors and industrial engineering teams.

ENGINEERING SUPPORT THAT FITS THE PROJECT

I help project teams handle overflow workloads, complete defined fire-protection packages, resolve drawing comments and prepare coordinated technical documentation - without adding a full-time resource.

FIRE ALARM

WATER-BASED

SPECIAL HAZARDS

QA / QC

CORE SERVICES

Focused support for design development, shop drawings, calculations, reviews and coordinated project documentation.

Fire Alarm Systems

- Detector and notification-device layouts
- Zoning, loop arrangements and riser diagrams
- Cause-and-effect matrices and device schedules
- Battery and voltage-drop calculation support
- Drawing review, redlines and as-built updates

Water-Based Suppression

- Sprinkler layouts and hydraulic calculations
- Hazard classification and remote-area review
- Fire-water demand, pump duty and storage assessment
- Standpipe, hydrant, hose-reel and fire-cabinet systems
- AutoSPRINK modelling and calculation review

Special Hazards & Smoke

- Foam-water suppression system support
- Clean-agent and gaseous suppression documentation
- Smoke-control and stairwell-pressurization support
- Industrial fire-safety ventilation and exhaust
- Design-basis and interface review

Technical QA / QC

- Independent drawing and calculation review
- Comment resolution and coordinated revisions
- BOQ / LOM and equipment schedules
- Technical reports, specifications and design notes
- Tender, shop-drawing and as-built documentation

TYPICAL DELIVERABLES

PDF / DWG drawings • Calculation summaries • System schematics • Equipment schedules • BOQ / LOM • Technical review notes

TOOLS

AutoCAD • AutoSPRINK • Revit • PyroSim

CODES & REFERENCES

NFPA 13 • NFPA 14 • NFPA 20 • NFPA 72 • Project specifications

A CLEAR, PRACTICAL WAY TO WORK TOGETHER

Flexible engagement models for a paid technical review, a defined design package or ongoing overflow engineering support.

HOW IT WORKS

01

Project review

Share available drawings, requirements, applicable codes, expected deliverables and schedule.

02

Scope & proposal

Receive a clear scope, assumptions, deliverables, timeline, revision limit and fee.

03

Design & coordination

Work proceeds through structured submissions, technical questions, updates and revisions.

04

Final delivery

Receive the agreed drawings, calculations, schedules and supporting technical documents.

WHY THIS SUPPORT WORKS

- **Code-aware engineering**
NFPA references, project specifications and documented assumptions.
- **Practical deliverables**
Drawings and reports prepared for coordination, review and constructability.
- **Structured communication**
Clear questions, progress updates and controlled revision cycles.
- **Confidentiality by design**
Client names, project identifiers and proprietary data are not published.

ENGAGEMENT OPTIONS

Paid technical review

A limited drawing or calculation package.

Fixed-scope design

Defined deliverables, timeline and revisions.

Ongoing overflow support

Remote capacity during busy project periods.

NEED ADDITIONAL ENGINEERING CAPACITY?

Share the available project information and receive a practical scope for remote fire protection engineering support.
